

Assignment – 4.5

2303A51641

Task 1: Suppose that you work for a company that receives hundreds of customer emails daily. Management wants to automatically classify emails into categories like "Billing", "Technical Support", "Feedback", and "Others" before assigning them to appropriate departments. Instead of training a new model, your task is to use prompt engineering techniques with an existing LLM to handle the classification.

PROMPT :

Classify the above below samples into one of the following categories: Billing, Technical Support, Feedback, Others.

Classify the above email samples into one of the following categories: Billing, Technical Support, Feedback, Others.Email: 'I have not received my invoice for last month.

Classify the below email samples into one of the following categories: Billing, Technical Support, Feedback, Others.Email: 'I have not received my invoice for last month. Billing, "Subject: Invoice #12345 Dear Customer, your invoice for the month of June is attached. Please make the payment by the due date. Best regards, Billing Team", "Technical Support", "Subject: Issue with Software Installation Hello Support Team, I am facing issues while installing the software on my computer. It shows an error code 404. Please assist. Thanks, User".

CODE and OUTPUT :

```
AI-4.5.py > classify_multiple_emails
1  #Management wants to automatically classify emails into categories like "Billing", "Technical Support", "Feedback", and "Others" before assigning them to a
2  #Create or collect 10 short email samples, each belonging to one of the 4 categories.

81     "I have not received my invoice for last month.",
82     "I am facing issues while installing the software on my computer. It shows an error code 404. Please assist."
83 ]
84 print(classify_multiple_emails(emails_to_classify)) # Output: ['Billing', 'Technical Support']

```

```

Technical Support
Billing
Others
Billing
['Billing', 'Technical Support']

```

Justification :

This task shows how prompt engineering can automate email sorting without building a custom model. Zero-shot prompting works for clear emails but may fail for overlapping categories. One-shot prompting improves understanding by providing a reference example. Few-shot prompting offers better accuracy by learning category patterns. This approach reduces manual effort and improves operational efficiency.

Task 2: Travel Query Classification

A travel assistant must classify queries into Flight Booking, Hotel Booking, Cancellation, or General Travel Info.

Tasks:

- a. Prepare labeled travel queries.
- b. Apply Zero-shot prompting.
- c. Apply One-shot prompting.
- d. Apply Few-shot prompting.
- e. Compare response consistency.

PROMPT :

A travel assistant must classify queries into Flight Booking, Hotel Booking, Cancellation, or General Travel Info. Tasks: a. Prepare labeled travel queries.

Classify the travel query into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "I need to book a flight to New York next week.",

Classify multiple travel queries into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "I need to book a flight to New York next week.", "Can you help me find a hotel in Paris?"

Classify multiple travel queries into one of the categories: Flight Booking, Hotel Booking, Cancellation, General Travel Info. "Can you help me find a hotel in Paris?""I would like to cancel my reservation for tomorrow.", "What are the travel restrictions for Italy?"

CODE and OUTPUT :

```

PS D:\AI>

```

Justification :

Travel-related queries often use similar language for different intents. Zero-shot prompting may misclassify such queries due to lack of context. One-shot prompting helps by giving a basic example. Few-shot prompting improves consistency and intent recognition. This task highlights the importance of contextual examples in user-facing assistants.

Task 3. Programming Question Type Identification

Scenario:

A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question.

Tasks:

- a. Prepare coding-related user queries.
- b. Perform Zero-shot classification.
- c. Perform One-shot classification.
- d. Perform Few-shot classification.
- e. Analyze improvements in technical accuracy.

PROMPT :

A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question. Tasks:
a. Prepare coding-related user queries.
b. Perform Zero-shot classification.
c. Perform One-shot classification.
d. Perform Few-shot classification.

CODE and OUTPUT :

```
191 #A coding help chatbot must classify queries into Syntax Error, Logic Error, Optimization, or Conceptual Question. Tasks:a. Prepare coding-related user qu
192 def classify_coding_query(query):

226 # Category: Optimization
227 # Query: Can you explain the concept of recursion in programming?
228 # Category: Conceptual Question
```

```
C:\Users\91921\Documents\AI\AI-4.0.py
Query: I am getting a syntax error when I run my Python code.
Category: Syntax Error

Query: My program is producing the wrong output, what could be the logic error?
Category: Logic Error

Query: How can I optimize my code for better performance?
Category: Optimization

Query: Can you explain the concept of recursion in programming?
Category: Conceptual Question

○ PS D:\AI>
```

Justification :

Programming queries require technical and contextual understanding. Zero-shot prompting may confuse syntax and logic-related issues. One-shot prompting provides some guidance to the model. Few-shot prompting significantly improves technical accuracy. This demonstrates how examples enhance domain-specific classification.

Task 4. Social Media Post Categorization

Scenario:

A social media analytics tool must classify posts into Promotion, Complaint, Appreciation, or Inquiry.

Tasks:

1. Prepare sample social media posts.
2. Use Zero-shot prompting.
3. Use One-shot prompting.
4. Use Few-shot prompting.
5. Analyze informal language handling.

PROMPT :

Social Media Post Categorization, A social media analytics tool must classify posts into Promotion, Complaint, Appreciation, or Inquiry. 1. Prepare sample social media posts. 2. Use Zero-shot prompting. 3. Use One-shot prompting. 4. Use Few-shot prompting. 5. Analyze informal language handling.

CODE and OUTPUT :

```
● Post: Huge sale on all products! Buy now and save big!  
Category: Promotion  
  
Post: I'm really disappointed with the service I received today.  
Category: Complaint  
  
Post: Thank you for the amazing support! You guys are awesome!  
Category: Appreciation  
  
Post: Can someone help me with my account settings?  
Category: Inquiry  
  
Post: Just wanted to share how much I love this new app!  
Category: Others
```

Justification :

Social media posts often contain informal language, slang, and emojis. Zero-shot prompting may struggle to interpret tone and intent correctly. One-shot prompting slightly improves classification. Few-shot prompting handles informal expressions more effectively. This task proves the value of examples in understanding unstructured text.
